## Rigid insulation "CR"

"CR" RIGID INSULATION

The most interesting product for the nautical applications is the special and exclusive CO.FE.ME. rigid insulation system ("CR"). This product is certified and patented.

In the nautical field and in other applications, this type of insulation out-performs other conventional systems in terms of strength and durability.

### CO.FE.ME. "CR" INSULATION BENEFITS:

CO.FE.ME. "CR" insulation is the result of an unstinting research in the insulation field, delivering the following benefits:

- 1. Solidness:** the rigid "CR" give an excellent hardness to the surface, an important feature during installation.
  - 2. Thickness:** is space saving in comparison with other conventional types of insulation.
  - 3. Durability:** the "CR" insulation is as durable as the hose itself, so there is no waste.
  - 4. Safety:** the "CR" insulation is hermetically sealed and cannot be damage by external agents, as it's air-tight and liquid proof. Our "CR" doesn't induce reflection or heat conduction.
- "CR" insulated parts meet all engine room requirements in terms of temperature and safety.
